

SAN SARU

The San Saru 22-carat gold-plated jewelry is made of Sterling Silver (925 thousandths). The plating is made in Spain. The thickness of the gold layer reaches 2 microns in the case of earrings, necklaces and bracelets, 3 microns in the case of rings.

All the jewelry have passed internal quality controls and those required by applicable regulations during the manufacturing process.

The jewelry has undergone metallographic tests to measure the thickness of the gold coating.

- Test method according to: UNE-EN ISO 1463.
- Procedure performed: PEE-LMT-007
- Test conditions: 23 ± 5 °C

The laboratory that performs the measurement of the gold coating thickness is “Laboratorio de ensayos y verificación 3D, (Metaltest)”.
